|                                 |                                 |                                |
|---------------------------------|---------------------------------|--------------------------------|
| <b>Full Stack Web Developer</b> | <b>Synora Technologies, Inc</b> | <b>December 2021 - Present</b> |
|---------------------------------|---------------------------------|--------------------------------|

Toronto, Canada

- Developed a fully functional classified ad system from scratch.
- Implemented one-time and recurring payments (subscriptions) with Stripe.
- Processed and converted data from the legacy website and imported it to the new database. Processed data contained more than 150 000 users, 500 000 messages, and thousands of ads.
- Developed role-specific account features, settings and pages.
- Developed an admin panel with website settings and content editing.
- Added integration with Mailgun, Twilio, Sentry, reCAPTCHA and other services.
- Managed the entire project development and deployment.

|                                      |                     |                                  |
|--------------------------------------|---------------------|----------------------------------|
| <b>Software Engineer (Front-End)</b> | <b>EPAM Systems</b> | <b>July 2021 - December 2021</b> |
|--------------------------------------|---------------------|----------------------------------|

Kyiv, Ukraine

- Led demos of the new functionality developed by our team for the client.
- Repeatedly participated in interviewing candidates for a front-end position.
- Developed a 12-step booking funnel module with prev/next navigation.
- Developed option selections such as room type, number of guests, hotel and insurance charges.
- Developed price and tax calculation based on a selected country and options.
- Attended regular stand-ups and retrospectives, participated in task evaluation with user story points using Fibonacci and Scrum Poker methods.

|                                 |                 |                              |
|---------------------------------|-----------------|------------------------------|
| <b>Full Stack Web Developer</b> | <b>Core dna</b> | <b>July 2020 - July 2021</b> |
|---------------------------------|-----------------|------------------------------|

Kyiv, Ukraine

- Redesigned the whole system (30+ pages) based on the design files provided.
- Performed code optimization which reduced the page load time by 40%.
- Developed an interactive form builder with multiple input types and settings.
- Decreased the build time by 80% for both local and production environments.
- Reviewed code/pull requests and helped team members solve various issues.

|                             |                   |                               |
|-----------------------------|-------------------|-------------------------------|
| <b>Full Stack Developer</b> | <b>MOM Design</b> | <b>April 2019 - July 2020</b> |
|-----------------------------|-------------------|-------------------------------|

Lviv, Ukraine
